

# ***Gratings: Theory and Numeric Applications***

ed. E. Popov (Institut Fresnel, CNRS, AMU, 2012)

ISBN: 2-85399-860-4

G. Demésy, F. Zolla, A. Nicolet, and B. Vial, Chapter 5: Finite Element Method

## **Table of Contents:**

5.1	Introduction . . . . .	1
5.2	Scalar diffraction by arbitrary mono-dimensional gratings : a Finite Element formulation . . . . .	2
5.2.1	Set up of the problem and notations . . . . .	2
5.2.2	Theoretical developments of the method . . . . .	4
5.2.3	Numerical experiments . . . . .	12
5.2.4	Dealing with Wood anomalies using Adaptative PML . . . . .	17
5.2.5	Concluding remarks . . . . .	23
5.3	Diffraction by arbitrary crossed-gratings : a vector Finite Element formulation . . . . .	25
5.3.1	Introduction . . . . .	25
5.3.2	Theoretical developments . . . . .	25
5.3.3	Energetic considerations: Diffraction efficiencies and losses . . . . .	30
5.3.4	Accuracy and convergence . . . . .	32
5.4	Concluding remarks . . . . .	40
5.A	APPENDIX . . . . .	41
