

Gratings: Theory and Numeric Applications

ed. E. Popov (Institut Fresnel, CNRS, AMU, 2012)

ISBN: 2-85399-860-4

Sebastien Guenneau, Richard Craster, Tryfon Antonakakis, Kirill Cherednichenko, and Shane Cooper, Chapter 11: Homogenization Techniques for Periodic Structures

Table of Contents:

11.1 Introduction	11.1
11.1.1 Historical survey on homogenization theory	11.1
11.1.2 Multiple scale method: Homogenization of microstructured fibers	11.3
11.1.3 The case of one-dimensional gratings: Application to invisibility cloaks	11.7
11.2 High-frequency homogenization	11.10
11.2.1 High Frequency Homogenization for Scalar Waves	11.10
11.2.2 Illustrations for Tranverse Electric Polarized Waves	11.15
11.2.3 Kirchoff Love Plates	11.19
11.3 High-contrast homogenization	11.20
11.4 Conclusion and further applications of grating theory	11.25
